

The Riverwood Luxury Apartment Lighting Project...

Three cheers to the owner and management team at Riverwood Apartments complex in Flint, MI for listening to tenants after years of asking for more lighting at the entryway to apartments as they would almost pass by the complex at night because the entry way was poorly lit. Well, after months of back and forth as to what would work and or look nice to install in this area, management agreed on the LED lighting installed in acorn style fixtures affixed on top of concrete wall in front of entry. The 100 watt LED corn cob bulb is installed in a 22" bridge top post with acorn globe. Problem solved, all can see their way home now.
